Hello
SA CAN FAMILY

TRACKBOX Communications Centre

TrackBox Communications Centre connects every single community group across South Africa in the palm of your hand. For example, a suspect vehicle in Johannesburg is loaded to the centralised system and can be detected by any TrackBox group or user anywhere in South Africa such as SAPS, Metro Police, a complex, shopping centre, neighbourhood watch, farmer, etc...

I cannot deny that I have eagerly anticipated this day and making this announcement is a truly huge development for TrackBox Technologies and for our country's citizens uniting in the fight against crime. Check out the tools below which offer you *a world first* in community crime prevention... There is still a long way to go, but the more TrackBox is downloaded across the country the sooner we will win the war on crime.

We have finished the development and upgrade of the **Message Centre** to the now fully integrated and renamed **Communications Centre**. This means that, with one tap on your screen, you have all your communications in one place.

To find the Communications Centre, open the TrackBox App and hit the button at the top right of the orange panel, i.e. COMMUNICATIONS CENTRE. Once opened, you will see the following 16 widgets:

Communications Centre

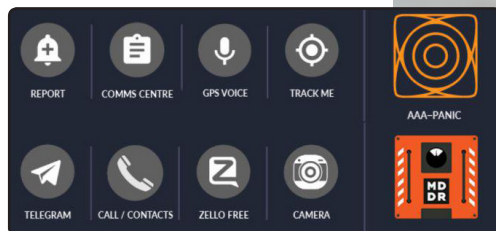

- WhatsApp
- Telegram
- Incident Map
- CEO/BPD (Brian's Passionate Desk)
- Call/Contacts
- VDR (Voice Data Recorder)
- SMS Messages
- Project Mustard Seed
- Facebook
- Facebook Messenger
- Twitter
- My Vault
- Camera
- Snipr Scan (Vehicle Licence Discs, ID Book)
- Gallery
- Attach Image
- Close App
- Arrow Back (TrackBox)

Widget Navigation Bar

We are extremely proud of this as it offers groundbreaking, patent application technology to you and also underlines SA CAN/TrackBox's total dedication to its client and membership base and indeed the entire country. To install this widget simply long-press on a blank space on your home screen, select 'Widget', then look for the TrackBox widget and drag it up to the screen of your choice (home screen is best).

From your home screen you now have everything in a box of two lines, essentially providing a shortcut to your TrackBox main features:

- Report
 - A Suspicious Person
 - A Suspicious Vehicle
 - Human Trafficking
 - Poaching with Dogs
 - Illegal Parking (QASA)
 - Anonymous Tip
- Communications Centre
- GPS Voice Note
- TrackMe
- Telegram
- Call/Contacts
- Zello Free
- Camera
- AAA - Panic Button (Anything! Anytime! Anywhere!)
- MDDR (Mobile Device Data Recorder)

ONE PLATFORM

You can now run your daily messaging and all your communications including neighbourhood watches, farm watches and businesses all from one place. No emergency service can be on every Telegram or WhatsApp group *but TrackBox has neatly incorporated all of these apps into one platform*. Anything that is of importance you can simply copy/paste into your Control Room (ERPC*) message box and hit 'Send'. Instantly an IMICS* case is opened by dispatchers who will action your message to the relevant roleplayers. It also means there is a full audit trail for each case from start to finish. Furthermore this is *instantly* mapped, so no intelligence is ever lost and full support is given.

MAP ALERTS

You can view the incident map via the widget. Make sure you have updated all your details in 'My Vault', especially your home, work, farm addresses, etc... as well as your chosen radius of alerts, or your map will not be updated and you will not receive any information directly relevant to you.

VDR

If you enable your Voice Data Recorder, not only can you keep track of your conversations but during an emergency you can quickly share this info to your entire community.

MDDR

(Mobile Device Data Recorder) is a must! Check this out and enable it for the highest level of technology support available *in the world* to date! It is the one key tool that has taken all users in emergency services support to a completely new level. A worldwide patent application has been accepted in New York for this tool. In the years to come we believe this innovation will become a standard feature available on all devices.

Through technology and teamwork we can take back our country from crime.

YOU can be a part of this.

TrackBox Communications Centre
is free!

N.B.

Please ensure you update your TrackBox Emergency App to the latest version at all times.
